# Discover the World of 3D Printing!

What is 3D Printing?

3D printing is a way to build real objects from a computer design. The object is made up of lots of very thin layers - the printer adds material one layer at a time, until the object is complete.

Who uses 3D Printers?

Anyone can use a 3D printer, many people even have them at home! Engineers also use them to create inventions, solve problems, and design amazing things like cars, rockets, and even medical tools! 3D printers are designed and built by engineers.

What is cool about 3D Printing?

- You can create almost anything you can imagine
- It helps people solve real-world problems
- It's fun, creative, and all about exploring new ideas!
